

Think about ...

Body Image

“ The model photos in mags aren't real - they've been airbrushed! ”

ACCEPT WHO YOU ARE

Think about ...

Body Image

You will probably become more aware of how you look around the time your body begins to change at puberty. Your body will start to change

shape; you will sweat more and may get spots.

Sometimes these changes can be difficult to deal with. Adjusting to your changing

body is about more than how you look. Changes in your body - even minor ones such as the way it smells - are all perfectly normal parts of growing up.

**Everyone grows differently and at different times.
Don't compare yourself to your friends or celebrities.**

As your body changes it is important to eat the right food, take regular exercise and wash daily as part of developing a healthy mind and body. Remember that genetics has an important

part to play on how your body is shaped - there are just some things you have no control over!

If you are worried about your height, weight gain

or loss, your appetite or eating habits, spots or other personal matters speak to a parent, a close relative or doctor for advice and support.

Sources of Support
